Professional Summary

Information Systems undergraduate (6th semester, GPA 3.71/4.00 as of Semester 5) seeking a Software Engineer / Web Developer internship, open to Front-End or Back-End roles. Hands-on experience across the stack: built a production-ready RESTful API backend (Laravel 12, Laravel Sanctum) for a live multi-module SaaS platform, and developed front-end/mobile interfaces using HTML, CSS, JavaScript, and Flutter. Currently expanding expertise in TypeScript and Vue.js. Known for strong analytical thinking, structured problem-solving, and a proactive approach to learning new technologies.

Technical Skills

- **Programming Languages:** HTML5, CSS3, JavaScript (ES6+), PHP, TypeScript
- **Frameworks & Tools:** Laravel, Laravel Sanctum, Flutter, Vue.js, Bootstrap, Git, GitHub, PostgreSQL, Postman
- **Concepts:** MVC Architecture, REST API Development, SaaS Architecture, Soft Delete, Database Migration, Automated Backup, Responsive Design, UI/UX Implementation
- **Development Practices:** Clean Code, Version Control, Agile (Scrum)

Education

Universitas Pamulang Bachelor of Information Systems (Semester 6) GPA: 3.71 / 4.00 (<i>as of Semester 5</i>)	South Tangerang, Indonesia 2024 – Present
SMK Islamiyah Ciputat Culinary Arts	Ciputat, Indonesia Graduated 2020

Project Experience

Kelolain – SaaS Invoice & Kasir Platform for UMKM github.com/ReAct22/kelolain_backend (<i>team repository</i>)	Team Project (Backend Developer)
• Developed a full-featured RESTful API backend using Laravel 12 and Laravel Sanctum for a live SaaS platform targeting Indonesian SMEs (UMKM), covering invoice management, product catalog, and point-of-sale features • Implemented core API modules including token-based authentication (1-device session), invoice CRUD with real-time stock validation, and multi-role user management (owner, admin, manager, staff) • Designed an SEO & Marketing module with per-product SEO metadata and a landing page builder (hero sections, promo banners, testimonials) • Applied Soft Delete across 10 database tables with soft-delete-aware unique validation rules to ensure data integrity across all modules • Built an automated daily backup system (Laravel Scheduler + PostgreSQL pg_dump) and managed 20+ migration files, with full API documentation via Postman (v7, 100+ endpoints)	
Attendance Management Mobile Application github.com/NaufalFebri2/absensi-karyawan-app	Team Project (Frontend Developer)
• Contributed as frontend developer, designing and building a mobile attendance management application using Flutter with a clean and intuitive user interface • Implemented key features including authentication, dashboard, attendance records, leave requests, and profile management, structured around a REST API-based backend architecture	
UMKM Cake Shop Website naufalfebri2.github.io/hvn-Cake	Personal Project
• Developed a responsive website for a local small business using semantic HTML, CSS, and JavaScript with a mobile-first design approach	

Organizational & Leadership Experience

Event Coordinator – Community & Social Activities	2022 – 2025
• Coordinated social events for approximately 30 participants and led cross-functional student teams, managing planning, budgeting, and logistics
